

## **POLYLINKS, INC. COMPLETES LATEST PHASE OF EXPANSION**

**ASHEVILLE, NC** – September 22, 2011 –

PolyLinks, Inc., a leading innovator in the rapid product realization and bio/med manufacturing industry, announced today that it has completed another phase of expansion to its headquarters in Asheville, NC. The additional 8,000 square feet of space completes a second round of construction the company has planned since 2009 after it acquired the property at 230 Sardis Road near the AB Tech Enka campus.

The newly completed area will house the company's administrative and engineering staff, and will also include a conference area for hosting manufacturing forums, technology exchanges, and other meetings focused on boosting biotechnology business in Western North Carolina.

*Executive offices and conference suite*

The next phase of renovations – currently underway and scheduled to be completed in early 2012 – will include Class 10,000 clean rooms for manufacturing and product assembly, and a biotech business incubator. PolyLinks plans to provide office space, developmental labs, and access to its manufacturing expertise for entrepreneurial-minded companies striving to bring innovative medical devices and biotech products to the market.

Prior to PolyLinks' purchasing the facility, the building served as the printing plant and warehouse for the Asheville Citizen-Times from 1986 to 2009. Upon acquiring the plant, PolyLinks began an extensive rehabilitation and renovation project that will ultimately transform the building into a hub of biotech business development for Western North Carolina. Once complete, the facility will contain more than 45,000 square feet of operational space.
